¹Logical capacity based on typically 50:1 data reduction (Data Domain All-Flash Ready Node, Data Domain Virtual Edition, DD3410); and typically 75:1 data reduction on the DD6410, DD9410, DD9910 and DD9910F, which includes additional hardware assisted data compression of typically 30%. Actual capacity & throughput depends on application workload, deduplication and other settings.

²TiBu/PiBu values adjusted for estimated DDOS overhead. DDOS overhead can vary depending on metadata required for customer workloads.

³High Availability configuration only, in a standard configuration SSDs are in the controller. High availability active/standby configuration is supported with DD9910 and DD9410.
